## Unit | Lesson | Notes: Conventions • An exponential function is of the form $f(x) = e^{Qx} \quad \text{where } q \text{ is a constant.}$

- · for positive a, eax dominates all polynomials
- ifor  $y = f(x) = x^2$ , y is a dependent variable and  $\chi$  is an independent variable
- · A parameter is a place holder representing an infinite set of equations, for example cin

$$\int x^2 dx = \frac{3}{3} + C$$

which's of 1-parameter family of fuhitions

· Derivative notation?

$$\frac{\partial x}{\partial \lambda} = \lambda_1 = D\lambda$$

$$\frac{\partial x}{\partial t} = \dot{x} \quad m \quad and$$

$$\frac{\partial^n x}{\partial t} = \chi^{(n)} = D^{(n)} \chi$$

. "A differential equation is an equation representing a relation between a function and its derivatives."

Basics of Differential Equations.
The order of a differential equation is highest in detirate
Jerivoitive in Gail equation;

$$\ddot{x}$$
 +2  $\dot{x}$  + 7 x=0 is 2ndorder,  
 $\dot{x}$  +3=0 is 6th order.

. We can checkif an x is voiled by taking derivatives and checking for equality.

$$\begin{array}{c}
(0r) & \text{integrate:} \\
(1) & \text{integrate:} \\
(1) & \text{integrate:} \\
(2) & \text{integrate:} \\
(3) & \text{integrate:} \\
(3) & \text{integrate:} \\
(4) & \text{integ$$

Given some initial values, such as  $\chi(1)=1$ ,  $\dot{\chi}(1)=2$ , we can flug in

$$1 = \frac{1}{3} + C_1 + C_2$$
 $2 = 1 + C_1$ , and thus
 $C_1 = 1$ ,  $C_2 = -1/3$ 

## Unit 1 Lesson 1 Quiz: Conventions

(hoites and logic

(i)  $y' = 2 ce^{2x} + 2 ce^{2x} - 2 + 1$ (i)  $y' = 2 ce^{2x} + 1 + 2 ce^{2x} - 2 + 1$ (i)  $y' = \frac{1}{2} e^{x/2} + e^{x/2} + 2c + 1$ (i)  $y' = 2 ce^{2x} = 2 ce^{2x} - 1/2 + 1$ (i)  $y' = 2 ce^{2x} = 2 ce^{2x} - 1/2 + 1$ (i)  $y' = 2 ce^{2x} = 2 ce^{2x} - 1/2 + 1$ (i)  $y' = 2 ce^{2x} = 2 ce^{2x} - 1/2 + 1$ (i)  $y' = 2 ce^{2x} = 2 ce^{2x} - 1/2 + 1$ (i)  $y' = 2 ce^{2x} = 2 ce^{2x} - 1/2 + 1$ (i)  $y' = 2 ce^{2x} = 2 ce^{2x} - 1/2 + 1$ (i)  $y' = 2 ce^{2x} = 2 ce^{2x} - 1/2 + 1$ (i)  $y' = 2 ce^{2x} = 2 ce^{2x} - 1/2 + 1$ (i)  $y' = 2 ce^{2x} = 2 ce^{2x} - 1/2 + 1$ (i)  $y' = 2 ce^{2x} = 2 ce^{2x} - 1/2 + 1$ (i)  $y' = 2 ce^{2x} = 2 ce^{2x} - 1/2 + 1$
